

# Zero-compromise detection intelligence

5 powerful ways Autocall Fire Site Administrator streamlines response to incidents.

## Comprehensive, centralized control

Manage up to 687 control units and 250,000 devices through any HTML5 browser.

## Round-the-clock security-focused performance

Software is designed to adhere to ISA/IEC 62443 security certification with potential vulnerability notifications.

## Effortless navigation capabilities

Enjoy intuitive control through detailed, color-coded building layouts and floor plans.

## Make the smart choice for centralized command and control.

5

Following cleaning, the smoke detector is tested, and any notes are digitally documented for easy reference.

1

A trouble notification is triggered in the building's data center among the thousands of devices actively monitored.

2

The operator receives a dashboard alert and navigates the graphical building layouts to the device's location.

3

Clicking on the device reveals that the smoke detector needs cleaning.

4

The operator reviews the issue and sends a maintenance request.
